AutoCAD LT, also called AutoCAD for Students, is a free, web-based, client-server solution that includes many of the features found in AutoCAD. Autodesk LT is also known as AutoCAD for Schools. AutoCAD is not the only CAD application available to engineers. Other popular CAD programs include AutoCAD LT, CATIA, Geomagic, Inventor, MicroStation, Navisworks, Pro/Engineer, AutoCAD R14, Solidworks, and Vectorworks. History AutoCAD was introduced in 1982 by AutoDesk Inc. (now a wholly owned subsidiary of Autodesk), in Palo Alto, California. (AutoDesk was founded in 1981 as a spin-off from the digital imaging division of Xerox's Palo Alto Research Center (PARC), in 1976.) The first AutoCAD release (AEC) was free for non-commercial use. The initial software was available only for the Apple II and Xerox Alto series, but AutoCAD R4.0 was made available for Intel-based PC platforms and was based on System Development Corporation's (SDS) S-100 bus operating system. SDS operating system started as a variant of the XENIX operating system. AutoCAD R4 was later made available for the Apple IIgs, Atari 800, Atari ST, and Commodore 64. Subsequent versions of AutoCAD have been made available for more platforms, including Amiga, Apple II, Atari ST, C64, DOS, Macintosh, Nintendo, and Sega Genesis. The application was ported to the Apple IIGS, a successor to the Apple IIGS, and to Mac OS X by Hipster in 2014. In 1984, AutoDesk introduced AutoCAD R5, a major overhaul of AutoCAD's user interface and functionality. An option to work with more than one drawing at once was introduced, and multi-level surfaces and other features were included, such as the ability to fill in 3D objects by snapping to a surface. R5 also introduced the raster-to-vector conversion feature that allowed users to "export" objects from a drawing into a vector-based format that could then be manipulated using different techniques. In 1985, AutoCAD R6 was released, introducing the concept of a multi-user network. These early days of AutoCAD saw the

Objects In AutoCAD, objects are sometimes created by a design operation, and sometimes by a command which creates a new instance of a particular object type. Object types are set in the User Preferences in the Preferences dialog. A drawing element is one type of object. The drawing element is actually an assembly of objects. A layer is a type of drawing element. When an object is created by a design operation, the command specified by the operation causes the design operation to be executed. When a new drawing element is created in a drawing, an object is also created. The objects in AutoCAD are known as classes. There are three classes of objects: Drawing objects Object objects In-place objects Drawing objects When a drawing is opened, each document contains several drawing objects, which are created when the drawing is opened. For example, when an AutoCAD drawing is opened, the following are created: The Viewport and Visible Layer A group called Page Setup A frame called Schematic Region A group called Scaling A frame called Scaling Layout Object objects Each object can be in one of three states: Object state. The object is located on the drawing canvas and is accessible for editing. Hidden state. The object is located on the drawing canvas and is invisible, but still exists. Suppressed state. The object is located on the drawing canvas and is visible, but has no Edit properties. In-place objects A drawing element, such as a layer or frame, can be created by design operation, by inserting a new shape, or by the command. Drawing commands The drawing commands manipulate drawing objects. A drawing command can be one of the following: Design commands. Design commands are associated with drawing objects. When you select a design command, you can apply a design operation or modify an existing design operation. Add commands. Add commands are associated with objects, but not with drawing elements. When you select a design command, you can add a new object, duplicate an object, or link an existing object to a new command. Layer commands. Layer commands are associated with a layer. Frame commands. Frame commands are associated with frames. Toolbar commands. Toolbar commands are associated with toolbar groups. Common commands Common commands are associated with drawing elements: Text commands. Text commands apply text 5b5f913d15
