
DCP Setup Maker Free Download

DCP Setup Maker Product Key (2022)

DCP Setup Maker is a professional software application built specifically for helping you create Java installation packages. Since this is a Java-based utility, you should make sure you have previously installed the working environment on the computer, otherwise you cannot run the tool. Intuitive interface The tool provides support for a step-by-step approach that offers you assistance throughout the entire creation process. This wizard mode comes in handy especially for rookies, as they can learn to set up the dedicated parameters with minimal effort. Building an installation package DCP Setup Maker gives you the possibility to scan the directory that contains the files that you want to include in your package and then filter some of them.

You can opt for a simple scanning mode which treats a directory as a whole single pack of files, or activate the recursive scanning option for getting packs from inside of directories. What's more, you are allowed to set the properties for each of your packs and organize them in different groups. A pack can be executed during the installation process, copied, or extracted to a target path. The tool lets you disable packs during the installation process, enable a shortcut for one or more packs to access them directly, as well as make a pack depend on a group of packs so that it won't be installed unless all packs of the dependent group are selected. An overall reliable utility DCP Setup Maker enables you to provide information about the application name and version number, insert several resources (e.g. Readme file, licence, images), as well as set the languages that are available for installation. All in all, DCP Setup Maker comes packed with a powerful suite of tools for helping you create Java installation packages and customize them in detail. If you want to skip the installation steps, you can download the portable version of the utility, which can be found here.
