Sun - JRE On CDs for Windows. JRE 1.4.2 Assessment of Java Technology Support. Download and Install the Java 2 Runtime Environment: Java 2 Runtime Environment 1.4.2. Download the latest versions of Java 2 Runtime Environment (JRE) 1.4.2: Java. Conventionally, when it is determined that security related information has been illegally obtained, by taking the illegal acquisition of the security related information as an example, in order to cope with the issue, illegal acquirers are prohibited from acquiring the security related information, or an information system for providing the security related information has been constructed. As described above, it is difficult to completely stop illegal acquisition of the security related information. For this reason, it is difficult to completely stop cases of receiving an illegal access to the information system by malicious attackers (hereinafter, referred to as “malicious attacker” or “attacker”). In addition, many users are allowed to access the information system, and security related information may be illegally leaked due to illegal accesses by a malicious attacker for which the malicious attacker is not prohibited from accessing the information system. Therefore, many techniques have been proposed for determining whether the security related information is illegally accessed. For example, a method of determining, by comparing a time when access is permitted and a time when access is restricted, whether access to the security related information is prohibited or not (for example, see Patent Document 1). Furthermore, a method of determining, by comparing a time when access is permitted and a time when access is restricted, whether the security related information is illegally obtained (for example, see Patent Document 2). Patent Document 1: Japanese Unexamined Patent Application Publication No. 2007-114175 Patent Document 2: Japanese Unexamined Patent Application Publication No. 2008-234512 Characterization of the neutralizing and hemagglutination-inhibiting antibodies in the sera of rabbits and mice with human influenza virus neutralization. The neutralizing, hemagglutination-inhibiting (HI) and complement-fixing (CF) antibodies in the sera of rabbits and mice with human influenza virus (HIV) neutralization were characterized. 570a42141b
