What the image shows is that eggs can have different shades of color within the same species. Color can be revealed in an egg by placing it under different lights. We just did it with an egg. Now, look at your eggs... Find the brown ones. You have good vision and can see the differences. Now look at the white ones. They are much more difficult to see. You may need to look for them longer. Let's start with the very obvious. See the brown one? The white one is more tricky, but you will get it. Look for the wavy lines... That's a different texture, but you can still find it. Look for the lines as you take away the cover. You may need to take off a few layers. Look for any wavy lines that are between layers of the egg. Try to isolate them.
