TypeError: Error #1009: Cannot access a property or method of a null object reference I am trying
to add a layer to an existing MXD file. I try to use: var layer =
App.ActiveDocument.ModifyLayers.Add(new Layer("name", "Karte")); But I get this error:
TypeError: Error #1009: Cannot access a property or method of a null object reference. I am using
ArcObjects version 10.3.1.2683 and ArcGIS 10.3.1.2683 A: App.ActiveDocument.ModifyLayers
returns a collection of Layer. The collection may not be empty but it is not an object. A layer can
only have one parent. As far as I can tell, this should be: var layer = App.ActiveDocument.Layer =
new Layer("name", "Karte"); An efficient approach for simultaneous purification of aptamer and

label from RNA library. Aptamers, which are single-stranded oligonucleotides capable of binding to specific target molecules, are often used to replace antibodies in biosensors. However, aptamers are limited by their poor chemical and biological stability. Here, we describe an efficient method for simultaneous purification of aptamers and labels from an RNA pool, which can be used to improve the development of molecular diagnostic assays.

ACOMAITI, Brazil (Reuters) - Enraged over a delayed bus ride, a group of intoxicated teenagers set fire to a coach full of schoolchildren in western Brazil on Monday, killing 10 and burning the bus, a driver said. The bus was waiting to leave a rural school in the southern state of Acre when the youths boarded at a samba school celebration and attacked a driver who was trying to start the bus. One of the youths was killed, but the rest escaped, said state security spokesman Mario Mena. "They were drunk and angry," said driver Ricardo Dias, one of the survivors. "They started kicking

Go to start->preferences->appearance. Click on the color chooser button. Select the option to change the color of the text. Type the color number in the corresponding fields in the form of #rrggbb For instance if you want to use #010111 (RGB color code) then you would use #010111 in the first field and #11 in the second. The corresponding Hexadecimal for RGB is #000, #00, #0, #0, #00, #00. A: If you open any app for editing the map/paper/whatever it usually has a key button at the top right of the application window. On my screen it looks like this: Sometimes it's very different on the apps you use. So what you need to do, is to look for your key button, click it, and it will give you the number. Then you click "Edit..." on the top right, and type in the RGB color code. When you are done, save the file and you're done. P.S. Find a tutorial on how to actually write that color code, because it's not that easy to look at that number and know that it is #ggggbb... A: The easiest way to do this is by going into your browser and typing this URL: A popup will come up that will let you choose your color. The Hex values are #rrggbb, so try typing in your color into the field, and this will work. Note: for some programs you have to change the "Altitude" to "Altitude:25m" before it will work. This is not the case with Google Earth though. The other question you asked about hexadecimal is how to convert that Hex value to RGB. This converter will convert Hex values to RGB values. 1. Technical Field The present invention relates to a resonant circuit to be inserted into the antenna line of a mobile telephone. The resonant circuit comprises at least one inductor and at least one capacitor, and is tuned to a specific frequency. The specific frequency may for example be 2.56 MHz. The resonant circuit may be configured

Add customer reviews and recommend sales prices to your drawings. This makes it easier for your team to quickly collaborate on the project, and reduces the risk of drawing conflicts. (video: 1:55 min.) Draw and submit reports directly from your computer. An enhanced report editor is a quick and easy way to quickly and easily make more beautiful reports in the following report formats: PDF, CSV, SVG, DWG, and Excel. (video: 1:11 min.) Get feedback and build a complete record of your drawings directly from CAD. Create an annotated drawing for quality assurance and incorporating customer feedback. This lets you see exactly what was added and modified in your drawing and provides a complete record of all changes. (video: 2:02 min.) Collaborate on different drawing views with your team members. You can collaborate on different drawing views at the same time. This means that you can continue working on your design, while your team members can share the drawing with others. (video: 2:05 min.) Collaborate on different drawing views at the same time. This means that you can continue working on your design, while your team members can share the

drawing with others. (video: 2:05 min.) Integration with Microsoft Office: With AutoCAD you can add Autodesk Revit models as external references to your drawings. You can connect Revit files to your project and collaborate with your team on the project directly from the Revit model. (video: 1:24 min.) Add Autodesk 360 models as external references to your drawings. This lets you quickly use and share a rich set of tools, including interactive rendering, interactive video, and animation. (video: 1:11 min.) Add Autodesk Dynamo models as external references to your drawings. The design-ready models are now faster and easier to use than ever before. (video: 1:42 min.) New Alignments and Placements: Use the Grid Measure tool to quickly and easily add grid lines, and get accurate measurements for your drawings. Use the Ruler tool to snap your grid lines or add a perpendicular to your drawing and turn it into a perfectly perpendicular drawing. (video: 1:14 min.) Set the number of degrees in the Arc Segment tool to 1 degree. You can now precisely draw arcs. (video: 1:14 min.)

System Requirements For AutoCAD:
