Bing Search About us The simple and fast loader. About Us Since its launch, we have continued to develop and improve the simple and fast loader. In the coming days, we will share the latest version. We are so committed to providing the absolute best in SEO at a reasonable price. Quick links Simple and free fast loader! SEO We use unique keywords and links to display our site in Google's search results as our main goal. The simple and fast loader is committed to maximizing the link diversity of our sites. Welcome to the simple and fast loader and a quick checkup of your site will get you started.Q: Java returning result from one method into another I am new to Java. I have a class Menu, this class is referenced by class Program. When Program executes its "execute" method I want it to return the result of a method in the Menu class. I am not able to get the result into "execute" method. private static void runMenu() { System.out.println("Starting Menu"); Menu menu = new Menu(); menu.findList(); } public static void main(String[] args) { Menu menu = new Menu(); menu.findList(); execute(menu); } public static void execute(Menu menu) { Menu.findList(); if (menu.getMenuCount() == 0) { System.out.println("No Items in the Menu"); } else { for (Menu i : menu) { System.out.println(i.getMenuItem()); System.out.println(i.getItemName()); System.out.println(i.getItemCost()); } } } A: Menu menu = new Menu(); menu.findList(); Declares an instance of Menu, which is new'd, but doesn't do
