## Fezzik [April-2022]

Features \* Selection of files from the current directory or directory tree \* Rename files using the text editor of your choice \* Can be used on a file tree window \* Saved and restored file states: It remembers which files you have changed and where they were changed to \* You can work on multiple files simultaneously \* Hold down Ctrl+Z to pause and save your changes \* Works with Windows, OS X, Linux Limitations \* Currently only works with files, not directories. Modifying a directory tree from the file window is not supported. \* If you try to edit a file which doesn't exist in the current directory, it will create it in its place. \* Directory/File structure are not respected. \* CMake scripts are not yet supported Usage Instructions Place files into the Fezzik folder. They should all have a.bzrinfo file. Open up your favorite text editor. Open the Fezzik folder. Select all files you want to rename. If you see the old and new names of your files, double-click on the name you want to change it to. Enter the new name for your file in the text field. Press Enter. Fezzik will attempt to open the.bzrinfo file of your file and rename the file accordingly. If you have any problems, please feel free to drop me a line. Ports For Unix systems, Fezzik is available in ports: raspberrypi: source (unstable) Windows Here is a file that can be used to run fezzik on Windows. It should support all the features of fezzik. You may also need the pyExpect library. Installation Notes Fezzik is kept up to date using the following setup: 0. Dependencies are installed via pip. 1. The bzd-json command line tool is installed using bzd. 2. A json python library is installed. 3. Fezzik itself is installed. Python is bundled to support all of the following (python 2.7+, python 3.3+, and python 3.4+). Python 3.4+ is not supported. jirka.kevin@kevinkalinux.com wrote: On Thu, Jul 25, 2014 at 4
