ValidateProxyAuthHandler is a named request handler for forwarding that // dynamically determines
if the request requires authentication. // This type of handler that recognizes a proxy is only used for
service // clients that are not operating over SSL or do not want to use TLS // through the standard
client SSL port. // // Using this handler will only allow access via the proxy. It will not force // the HTTP
client to use the proxy, only that the request is sent to the // proxy. // // svc := s3.New(sess,
